

Energy Services:

- Energy Reduction Programmes
- Energy Contracting
- Renewable Technology Integration
- Energy Design Services
- Energy Procurement and Bill Analysis
- Life Cycle Analysis of Plant Procurement
- Energy Monitoring and Targeting

Who we serve:

- Offices
- Pools and Leisure
- Industrial
- Schools
- Hotels
- Data Centres
- Multiple Sites
- Laboratories
- Treatment Plants
- Healthcare
- Retail
- Residential
- Shopping Centres
- Nursing Homes

Our Clients include:

Why work with us?

Unlike many 'new entrants' to this sector we have 30 years experience designing, commissioning and monitoring the electrical and mechanical systems that are responsible for energy consumption within buildings. This in depth understanding of building systems means that we are uniquely positioned to reduce energy consumption. We adopt a holistic approach to potential reduction of energy, water and operational costs which cannot be offered by our competitors.

Recent Projects:

EPA Headquarters, Wexford

Through the installation of a biomass boiler, automated lighting system, automated facades, heat recovery systems, rain water harvesting and photovoltaic's, the client has a highly energy efficient building achieving a Building Energy Rating of A3.

Ireland's largest photovoltaic array

Dunnes Stores

Noel Lawler Green Energy Solutions have worked extensively with Dunnes Stores to reduce their energy usage leading to an award with SEAI Sustainable Energy Awards 2009 Category D Inspiring Energy Awareness Campaign for their energy reduction program which resulted in reduced annual electricity consumption by 17.4%.

Testimonial

"An energy audit of our Shopping Centre provided us with measures to save €30,000 annually on electrical costs. We have started implementing these recommendations and are reaping the financial benefits now. We would recommend their use to any one looking to reduce their energy costs"

Dan O'Connor, Centre Manager
Charlestown Shopping Centre
